PROFESSIONAL SUMMARY

Operations and business transformation leader experienced leading cross-functional initiatives in complex manufacturing environments. Skilled at bringing structure to ambiguous problems, aligning technical and business stakeholders, and using data to drive operational decisions. Proven record of leading process improvements, standardizing workflows, and delivering measurable business results through collaboration, analytical problem solving, and disciplined execution.

WORK EXPERIENCE

Manufacturing Operations Supervisor

Sep 2021 – Present

NXP Semiconductors

Austin, TX

- Led a cross-functional operational improvement program from problem definition through implementation, coordinating Engineering, Industrial Engineering, Equipment Engineering, and Operations to identify workflow inefficiencies, manage implementation dependencies, mitigate operational risks, and deliver more than \$200K in annualized labor savings.
- Developed a production operations dashboard integrating live manufacturing data into standardized performance metrics, enabling data-driven capacity planning, throughput monitoring, and cross-functional operational decision making.
- Led daily operations for a high-volume semiconductor manufacturing organization supporting critical production infrastructure, balancing equipment availability, staffing, operational capacity, quality, and cross-functional engineering priorities across teams of 20–40 associates.
- Led cross-functional post-mortem following a facility-wide power loss event, partnering with Engineering, Facilities, Contamination Control, Gas & Chemical, and Operations to redesign emergency response procedures, standardize documentation, and improve operational readiness.
- Investigated a production event initially classified as human error by analyzing FDC data and leading structured root-cause analysis efforts, identifying a failed gate valve locking mechanism as the underlying issue and redirecting corrective actions based on objective findings.

Inventory Lead Analyst

Sep 2019 – Aug 2021

Lululemon

Austin, TX

- Partnered with operations, supply chain, and regional leadership teams to support inventory planning and fulfillment strategy.
- Developed Excel-based reporting tools used by leadership to monitor delayed shipments, inventory movement, and fulfillment risks.
- Identified approximately \$560K in delayed shipments, helping leadership prioritize inventory reallocation and reduce fulfillment disruptions.
- Supported weekly sales forecasting and operational planning using inventory and sales trend analysis.

SKILLS

Business Transformation & Process Improvement: Root Cause Analysis, Business Process Improvement, Lean Manufacturing, Continuous Improvement, Operational Planning, SOP Development, Risk Assessment

Analytics: Statistical Analysis, Machine Learning, Data Visualization, Dashboard Development, KPI Reporting

Programming & Data: Python, SQL, PostgreSQL, Excel, VBA, Data Visualization

Program and Stakeholder Leadership: Cross-Functional Collaboration, Stakeholder Management, Project Leadership, Executive Communication

EDUCATION

Post-Graduate Program in Data Science & AI/ML University of Texas	2026 Austin, TX
Data Analytics and Visualization Certificate Program University of Texas	2023 Austin, TX
Bachelor of Science in Business Administration, Economics University of Missouri	2019 Columbia, MO
Associate of Science in Business Management and Accounting Barton County Community College	2017 Great Bend, KS
